

Generative AI Prompts and Responses

Thesis: Clairo: AI-Powered Document Intelligence Platform

Purpose

This document provides representative examples of Generative AI prompts used during preparation of the thesis. AI was used to assist with brainstorming, language refinement, technical explanations, and proofreading. All content was reviewed, edited, and verified by the authors before inclusion.

Example 1 – Literature Review

Prompt: Explain Retrieval-Augmented Generation (RAG), its architecture, advantages, and summarize key academic work suitable for a master's thesis.

Response Summary: Explained retriever-generator architecture, hallucination reduction, and foundational papers including Lewis et al. (2020).

Use: Independently verified and rewritten before inclusion.

Example 2 – Academic Writing

Prompt: Rewrite the following paragraph in formal academic English while preserving its meaning.

Response Summary: Improved grammar, readability, and academic tone.

Use: Final text manually edited before inclusion.

Example 3 – System Architecture

Prompt: Describe a RAG architecture for an AI document intelligence platform using Node.js, LangChain, ChromaDB, PostgreSQL, and an LLM.

Response Summary: Produced a structured description of ingestion, chunking, embeddings, retrieval, reranking, and answer generation.

Use: Used as drafting assistance; final architecture reflects the implemented system.

Example 4 – Proofreading

Prompt: Proofread this section for grammar, clarity, and academic style without changing the technical meaning.

Response Summary: Corrected grammar and improved clarity while preserving technical accuracy.

Use: Suggestions were manually reviewed before acceptance.

Declaration

Generative AI was used solely as an assistive tool for brainstorming, drafting, proofreading, and language improvement. The authors verified factual information using academic sources, reviewed all generated content, and accept full responsibility for the final thesis.
